

## FEATURES OF SSC IGNITION WIRE

### 1. UNITED-PACKARD SSC SILICONE JACKET

- Provides the highest under-hood protection against chemicals, oil, abrasion and the extreme heat conditions of today's engines.
- Used on ALL applications even when NOT specified by O.E.M.

### 2. COMPOSITE BRAID

- A tightly woven fiberglass and nylon braid is bonded between the inner Silicone layer and Hi Heat Silicone jacket to greatly increase cable strength and to virtually eliminate terminal pull-off.

### 3. 100% SILICONE INSULATION

- A double thick layer of High temperature silicone is extruded over the SSC silicone core to maintain the core's high dielectric properties needed to keep today's high-tech engines running smoother, longer.

### 4. SILICONE OUTER CORE

- THE HIGHLY CONDUCTIVE ARAMID CORE IS OVERLAID WITH AN EXTRA THICK CONDUCTIVE SILICONE LATEX COMPOUND TO PROTECT THE CORE FROM EXCESSIVE HEAT AND TO INCREASE THE CORE'S CONTACT AREA TO THE TERMINAL BY MORE THAN ONE THIRD.
- THE FLEXIBLE SILICONE CORE RETAINS ALL O.E.M. SPECIFICATIONS

FOR DIELECTRIC RESISTANCE EVEN AFTER 2,000 HOURS OF CONTINUOUS 500° HEAT.

- PRACTICALLY ELIMINATES CORE BURN OUT ASSOCIATED WITH OTHER NON FLEXIBLE CORES.

### 5. ARAMID INNER CORE

- STRANDS OF ARAMID ARE IMPREGNATED AND COATED WITH A SPECIAL HIGHLY CONDUCTIVE CARBON LATEX, THEN WOVEN TOGETHER TO FORM A "STRONGER-THAN-STEEL" CORE CAPABLE OF CARRYING TWICE THE VOLTAGE NEEDED TO EFFICIENTLY FIRE TODAY'S HIGH REVVING ENGINES.
- VIRTUALLY ELIMINATES INNER CORE BREAKAGE DUE TO EXCESSIVE PULLING AND BENDING.
